Drive better production and increase efficiencies with industrial utilities.

Gain actionable insights of your utilities with our modern industrial utilities solution to help you operate with agility and efficiency

Traditional utilities monitoring were never designed to handle today's explosive growth in data, run advanced analytics, or scale quickly and cost-effectively. This impacts the ability for manufacturers to unlock valuable insights across all areas of the value chain..

Fully Managed & scalable for ease of use with no IT complexity

Innovation with AI to help predict business outcomes with advanced AI driven apps

Real-time Insights created from near-real-time data streams

Service
Legacy Utilities systems are challenged in analyzing the deluge of real-time data to provide service recommendations

Manufacture
Rapid growth of IoT sensors can lead to new insights, but legacy systems are unequipped to handle the data

Benefits

Smart-View Technology highly scalable, enterprise industrial utilities solution offers real-time insights, has built-in ML, and has a high-speed in memory BI engine for faster reporting and analysis. Customers use Smart-View Industrial Utilities:

- Get instant insights with real time analytics
- Realize the power of advanced and predictive analytics
- Minimize damages caused in the process of searching for or exposing leaks.
- Limit, reduce or prevent damage to buildings cased by concealed water leaks.
- Burst Pipe Detection.
- Leak Detection

Virginactive

Virgin Active undertook extensive measures to save water

Resulted in a total water savings of more than **1200kl for the first month**

Reduce **unneccessary** water consumption

Increased ability to detect **wastage**, creating cost saving opportunities
