**SmartView** TECHNOLOGY

Energy and Water Sustainability Utility Management Software for Retail

Our software empowers owners and managers of extensive retail building portfolios to enhance energy efficiency across numerous locations. With our platform, you can shift your focus away from manual billing calculations and data collection. Our automated system handles these tasks, providing you with accurate, timely billing and comprehensive meter data analysis from thousands of stores. This automation not only saves you time but also ensures energy efficiency and cost savings across your entire portfolio.

Key Features:

Energy & Water Efficiency

Identify and manage large users, prioritize savings initiatives, and verify outcomes to reduce costs and enhance sustainability.

Billing Simplified

Streamline the billing process by eliminating all manual steps, including data collection and billing calculations, with our automated billing module.

Smart-View Analytics

Real-time monitoring of specific areas or equipment, automated alerts for irregularities, and power usage trend analysis to predict and manage peak demands effectively.

Customer Experience Optimization

Use energy data to optimize store comfort, lighting, and climate, boosting customer satisfaction and sales.

Benefits:

- **Resource Management:** Optimize energy and water use across all stores with detailed consumption insights for better efficiency and sustainability.

- **Automated Billing:** Simplify billing with automated calculations, reducing manual effort and ensuring accuracy across all stores.
